VE600 Engraving System

The engraving unit was specifically designed to be used with the CMPS600BASIC and CMPS600 plotter systems. Changing back and forth between the pen-plotter and the engraver is easy. The engraver is meant to engrave signs on plastic, aluminium and other soft metals. Legend plates, push button inlays and other signage etc. can easily be produced with the VE600 engraving system.

The engraver also uses the standard CMPS software.
